UNIVERSITY OF MUMBAI No. UG/18 of 2016-17

CIRCULAR:-

A reference is invited to the Syllabi relating to the B.Sc. degree course, vide this office Circular No. UG/15 of 2016, dated 15th June, 2016 and the Principals of affiliated Colleges in Science are hereby informed that the recommendation made by Board of Studies in Science at its meeting held on 23rd June, 2016 has been accepted by the Academic Council at its meeting held on, 24th June 2016 <u>vide</u> item Nos. 4.82 and that the accordance therewith, the revised syllabus of F.Y.B.Sc. (Computer Science) (Sem. I & II), (Credit Based Semester and Grading System),which is available on the University's web site (www.mu.ac.in) and that the same has been brought into force with effect from the academic year 2016-17 which is read as under :-

1. The syllabus of F.Y.B.Sc. (Computer Science) is re-structured.

2. The Intake capacity of this course as per Govt.of Maharashtra and

University of Mumbai's sanction is unchanged.

3. The Eligibility for the course is unchanged.

4. The fees for the course is Rs.30,000/- per years.

(Dr.M.A.Khan) REGISTRAR

MUMBAI - 400 032

To,

The Principals of affiliated Colleges in Science.

A.C/ 4.82/24/06/2016.

No. UG/ 18 of 2016

MUMBAI-400 032 27 June, 2016

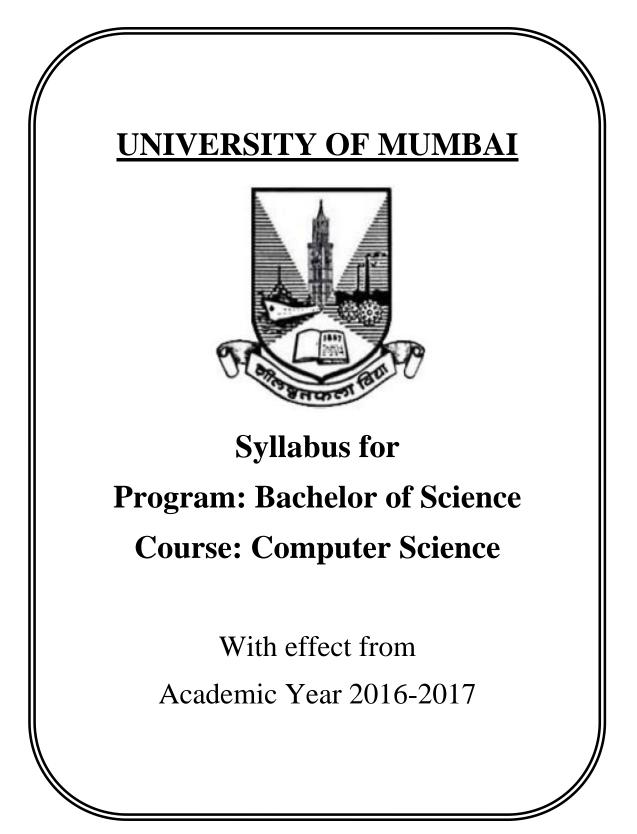

Copy forwarded with compliments for information to:-

- 1. The Dean, Faculty of Science
- 2. The Director, Board of College and University Development,
- 3. The Controller of Examinations,
- 4. The Co-Ordinator, University Computerization Centre.

(Dr.M.A.Khan) REGISTRAR

PTO-

Academic Council 24/06/2016 Item No: _____

Preamble

Information and Communication Technology (ICT) has today become integral part of all industry domains as well as fields of academics and research. The industry requirements and technologies have been steadily and rapidly advancing. Organizations are increasingly opting for open source systems. The students too these days are thinking beyond career in the industry and aiming for research opportunities.

The B.Sc. Computer Science course structure therefore needed a fresh outlook and complete overhaul. A real genuine attempt has been made while designing the new syllabus for this 3-year graduate course. Not only does it prepares the students for a career in Software industry, it also motivates them towards further studies and research opportunities.

The core philosophy of overall syllabus is to -

- a. Form strong foundation of Computer science,
- b. Introduce emerging trends to the students in gradual way,
- c. Groom the students for the challenges of ICT industry

In the first year i.e. for semester I & II, basic foundation of important skills required for software development is laid. The syllabus proposes to have four core subjects of Computer science and two core courses of Mathematics-Statistics. All core subjects are proposed to have theory as well as practical tracks. While the Computer Science courses will form fundamental skills for solving computational problems, the Mathematics & Statistics course will inculcate research-oriented acumen.

The syllabus design for further semesters encompasses more advanced and specialized courses of Computer Science.

We sincerely believe that any student taking this course will get very strong foundation and exposure to basics, advanced and emerging trends of the subject. We hope that the students' community and teachers' fraternity will appreciate the treatment given to the courses in the syllabus.

We wholeheartedly thank all experts who shared their valuable feedbacks and suggestions in order to improvise the contents, we have sincerely attempted to incorporate each of them. We further thank Chairperson and members of Board of Studies for their confidence in us.

Special thanks to Department of Computer Science and colleagues from various colleges, who volunteered or have indirectly helped designing certain specialized courses and the syllabus as a whole.

Semester I – Theory

Course:	Computer Organization and Design	
USCS101	(Credits : 2 Lectures/Week: 3)	
Objectiv To unde	res. rstand the structure and operation of modern processors and their instruction sets	1
1) To 2) To 3) To 4) To	d Learning Outcomes: o learn about how computer systems work and underlying principles o understand the basics of digital electronics needed for computers o understand the basics of instruction set architecture for reduced and complex instruction o understand the basics of processor structure and operation o understand how data is transferred between the processor and I/O devices	sets
Unit I	Computer Abstractions and Technology: Basic structure and operation of a computer, functional units and their interaction. Representation of numbers and characters. Logic circuits and functions: Combinational circuits and functions: Basic logic gates and functions, truth tables; logic circuits and functions. Minimization with Karnaugh maps. Synthesis of logic functions with and-or-not gates, nand gates, nor gates. Fan-in and fan-out requirements; tristate buffers. Half adder, full adder, ripple carry adder. (Flip flops) Gated S-R and D latches, edge-triggered D latch. Shift registers and registers. Decoders, multiplexers. Sequential circuits and functions: State diagram and state table; finite state machines and their synthesis.	15 L
Unit II	Instruction set architectures: Memory organization, addressing and operations; word size, big-endian and little- endian arrangements. Instructions, sequencing. Instruction sets for RISC and CISC (examples Altera NIOS II and Freescale ColdFire). Operand addressing modes; pointers; indexing for arrays. Machine language, assembly language, assembler directives. Function calls, processor runtime stack, stack frame. Types of machine instructions: arithmetic, logic, shift, etc. Instruction sets, RISC and CISC examples.	15 L
Unit III	 Basic Processor Unit: Main components of a processor: registers and register files, ALU, control unit, instruction fetch unit, interfaces to instruction and data memories. Datapath. Instruction fetch and execute; executing arithmetic/logic, memory access and branch instructions; hardwired and microprogrammed control for RISC and CISC. Basic I/O: Accessing I/O devices, data transfers between processor and I/O devices. Interrupts and exceptions: interrupt requests and processing. 	15 L

Course: USCS102	Programming with Python- I (Credits : 2 Lectures/Week: 3)	
Expected I 1) Stud prog 2) Stud 3) Stud conc 4) Stud	ive of this paper is to introduce various concepts of programming to the students using P earning outcomes ents should be able to understand the concepts of programming before actually starting grams. ents should be able to develop logic for Problem Solving. ents should be made familiar about the basic constructs of programming such as data, o litions, loops, functions etc. ents should be able to apply the problem solving skills using syntactically simple languag con (version: 3.X or higher)	to write perations,
Unit I	Reasons for Python as the learner's first programming language. Introduction to the IDLE interpreter (shell) and its documentation. Expression evaluation: similarities and differences compared to a calculator; expressions and operators of types int, float, boolean. Built-in function type. Operator precedence. Enumeration of simple and compound statements. The expression statement. The assert statement, whose operand is a boolean expression (values true or false). The assignment statement, dynamic binding of names to values, (type is associated with data and not with names); automatic and implicit declaration of variable names with the assignment statement; assigning the valueNone to a name. The del (delete) statement. Input/output with print and input functions. A statement list (semicolon-separated list of simple statements on a single line) as a single interpreter command. The import statement for already-defined functions and constants. The augmented assignment statement def to define functions; the role of indentation for delimiting the body of a compound statement; calling a previously defined function. Compound data types str, tuple and list (enclosed in quotes, parentheses and brackets, respectively). Indexing individual elements within these types. Strings and tuples are immutable, lists are mutable. Built-in functions min, max, sum. Interactive solution of model problems, (e.g., finding the square root of a number or zero of a function), by repeatedly executing the body of a loop (where the body is a statement list).	15 L

Unit II	Advantages of functions, function parameters, formal parameters, actual parameters, global and local variables. The range function, the iterative for statement. The conditional statements if, if-else, if-elif-else. The iterative statements while, while-else, for-else. The continue statement to skip over one iteration of a loop, the break statement to exit the loop. Nested compound statements. Dictionaries: concept of key-value pairs, techniques to create, update and delete dictionary items. Problem-solving using compound types and statements.	15 L
Unit III	Anonymous functions. List comprehensions. Gentle introduction to object-oriented programming; using the built-in dir() function, enumerate the methods of strings, tuples, lists, dictionaries. Using these methods for problem-solving with compound types.	15 L

Course: USCS103	Free and Open-source Software (Credits : 2 Lectures/Week: 3)	
Objective:	· ·	
Open Sour	ce has acquired a prominent place in software industry. Having knowledge of Open So	ource and its
related tec	hnologies is an essential for Computer Science student. This course introduces Open S	Source
methodolo	gies and ecosystem to students.	
Expected L	earning Outcome:	
1) Upo	n completion of this course, students should have a good working knowledge of Open	Source
ecos	ystem, its use, impact and importance.	
2) This	course shall help student to learn Open Source methodologies, case studies with real	life
exar	nples.	
	Introduction	
	Introduction: Open Source, Free Software, Free Software vs. Open Source	
	software, Public Domain Software, FOSS does not mean no cost. History: BSD,	
	The Free Software Foundation and the GNU Project.	
	Methodologies	
Unit I	Open Source History, Initiatives, Principle and methodologies. Philosophy :	15L
	Software Freedom, Open Source Development Model Licenses and Patents: What	
	Is A License, Important FOSS Licenses (Apache, BSD, GPL, LGPL), copyrights and	
	copy lefts, Patents Economics of FOSS : Zero Marginal Cost, Income-generation	
	opportunities, Problems with traditional commercial software,	
	Internationalization	1

	Social Impact Open source vs. closed source, Open source government, Open source ethics. Social and Financial impacts of open source technology, Shared software, Shared source, Open Source in Government.		
Unit II	Case Studies Example Projects: Apache web server, GNU/Linux, Android, Mozilla (Firefox), Wikipedia, Drupal, wordpress, GCC, GDB, github, Open Office. Study: Understanding the developmental models, licensings, mode of funding,commercial/non-commercial use. Open Source Hardware, Open Source Design, Open source Teaching. Open source media. Collaboration, Community and Communication Contributing to Open Source Projects Introduction to github, interacting with the community on github, Communication and etiquette, testing open source code, reporting issues, contributing code. Introduction to wikipedia, contributing to Wikipedia Or contributing to any prominent open source project of student's choice. Starting and Maintaining own Open Source Project.	15L	
Unit III	Understanding Open Source Ecosystem Open Source Operating Systems: GNU/Linux, Android, Free BSD, Open Solaris. Open Source Hardware, Virtualization Technologies, Containerization Technologies: Docker, Development tools, IDEs, debuggers, Programming languages, LAMP, Open Source database technologies	15L

Course:	Database Systems		
USCS104	(Credits : 2 Lectures/Week: 3)		
 Objectives: The objective of this course is to introduce the concept of the DBMS with respect to the relational model, t specify the functional and data requirements for a typical database application and to understand creation manipulation and querying of data in databases Expected Learning Outcomes Students should be able to evaluate business information problem and find the requirements of problem in terms of data. Students should be able to design the database schema with the use of appropriate data types for storage of data in database. Students should be able to create, manipulate, query and back up the databases. 			
Unit I	 Introduction to DBMS – Database, DBMS – Definition, Overview of DBMS, Advantages of DBMS, Levels of abstraction, Data independence, DBMS Architecture Data models - Client/Server Architecture, Object Based Logical Model, Record Based Logical Model (relational, hierarchical, network) Entity Relationship Model - Entities, attributes, entity sets, relations, relationship sets, Additional constraints (key constraints, participation constraints, weak entities, aggregation / generalization, Conceptual Design using ER (entities VS attributes, Entity Vs relationship, binary Vs ternary, constraints beyond ER) Relational data model – Domains, attributes, Tuples and Relations, Relational Model Notation, Characteristics of Relations, Relational Constraints - primary key, referential integrity, unique constraint, Null constraint, Check constraint ER to Table- Entity to Table, Relationship to tables with and without key constraints. 	15L	
Unit II	 Schema refinement and Normal forms: Functional dependencies, first, second, third, and BCNF normal forms based on primary keys, lossless join decomposition. Relational Algebra operations (selection, projection, set operations union, intersection, difference, cross product, Joins –conditional, equi join and natural joins, division) DDL Statements - Creating Databases, Using Databases, datatypes, Creating Tables (with integrity constraints – primary key, default, check, not null), Altering Tables, Renaming Tables, Dropping Tables, Truncating Tables, Backing Up and Restoring databases DML Statements – Viewing the structure of a table insert, update, delete, Select all columns, specific columns, unique records, conditional select, in clause, between clause, limit, aggregate functions (count, min, max, avg, sum), group by clause, having clause 	15L	

Unit III	 Functions – String Functions (concat, instr, left, right, mid, length, lcase/lower, ucase/upper, replace, strcmp, trim, ltrim, rtrim), Math Functions (abs, ceil, floor, mod, pow, sqrt, round, truncate) Date Functions (adddate, datediff, day, month, year, hour, min, sec, now, reverse) Joining Tables – inner join, outer join (left outer, right outer, full outer) Subqueries – subqueries with IN, EXISTS, subqueries restrictions, Nested subqueries, ANY/ALL clause, correlated subqueries Database Protection: Security Issues, Threats to Databases, Security Mechanisms, Role of DBA, Discretionary Access Control Views (creating, altering dropping, renaming and manipulating views) DCL Statements (creating/dropping users, privileges introduction, granting/revoking privileges, viewing privileges) 	15L

Course:	Discrete Mathematics	
USCS105	(Credits : 2 Lectures/Week: 3)	

Objectives:

The purpose of the course is to familiarize the prospective learners with mathematical structures that are fundamentally discrete. This course introduces sets and functions, forming and solving recurrence relations and different counting principles. These concepts are useful to study or describe objects or problems in computer algorithms and programming languages.

Expected Learning Outcomes:

- 1) To provide overview of theory of discrete objects, starting with relations and partially ordered sets.
- 2) Study about recurrence relations, generating function and operations on them.
- 3) Give an understanding of graphs and trees, which are widely used in software.
- 4) Provide basic knowledge about models of automata theory and the corresponding formal languages.

	Recurrence Relations	
Unit I	 (a) Functions: Definition of function. Domain, co domain and the range of a function. Direct and inverse images. Injective, surjective and bijective functions. Composite and inverse functions. (b) Relations: Definition and examples. Properties of relations, Partial Ordering sets, Linear Ordering Hasse Daigrams, Maximum and Minimum elements, Lattices (c) Recurrence Relations: Definition of recurrence relations, Formulating recurrence relations, solving recurrence relations- Back tracking method, Linear homogeneous recurrence relations with constant coefficients. Solving linear homogeneous recurrence relations with constant coefficients of degree two when characteristic equation has distinct roots and only one root, Particular solutions of non linear homogeneous recurrence relations, Applications- Formulate and solve recurrence relation for Fibonacci numbers, Tower of Hanoi, Intersection of lines in a plane, Sorting Algorithms. 	15L
Unit II	 Counting Principles, Languages and Finite State Machine (a) Permutations and Combinations: Partition and Distribution of objects, Permutation with distinct and indistinct objects, Binomial numbers, Combination with identities: Pascal Identity, Vandermonde's Identity, Pascal triangle, Binomial theorem, Combination with indistinct objects. (b) Counting Principles: Sum and Product Rules, Two-way counting, Tree diagram for solving counting problems, Pigeonhole Principle (without proof); Simple examples, Inclusion Exclusion Principle (Sieve formula) (Without proof). (c) Languages, Grammars and Machines: Languages , regular Expression and Regular languages, Finite state Automata, grammars, Finite state machines, Gödel numbers, Turing machines. 	15L
Unit III	 Graphs and Trees (a) Graphs : Definition and elementary results, Adjacency matrix, path matrix, Representing relations using diagraphs, Warshall's algorithm- shortest path , Linked representation of a graph, Operations on graph with algorithms - searching in a graph; Insertion in a graph, Deleting from a graph, Traversing a graph-Breadth-First search and Depth-First search. (b) Trees: Definition and elementary results. Ordered rooted tree, Binary trees, Complete and extended binary trees, representing binary trees in memory, traversing binary trees, binary search tree, Algorithms for searching and inserting in binary search trees, Algorithms for deleting in a binary search tree 	15L

Course: USCS106	Descriptive Statistics and Introduction to Probability (Credits : 2 Lectures/Week: 3)		
 Objectives: The purpose of this course is to familiarize students with basics of Statistics. This will be essential for persearchers and professionals to know these basics. Expected Learning Outcomes: Enable learners to know descriptive statistical concepts Enable study of probability concept required for Computer learners 			
Unit I	 Data Presentation Data types : attribute, variable, discrete and continuous variable Data presentation : frequency distribution, histogram o give, curves, stem and leaf display Data Aggregation Measures of Central tendency: Mean, Median, mode for raw data, discrete, grouped frequency distribution. Measures dispersion: Variance, standard deviation, coefficient of variation for raw data, discrete and grouped frequency distribution, quartiles, quantiles Real life examples 	15L	
Unit II	 Moments: raw moments, central moments, relation between raw and central moments Measures of Skewness and Kurtosis: based on moments, quartiles, relation between mean, median, mode for symmetric, asymmetric frequency curve. Correlation and Regression: bivariate data, scatter plot, correlation, nonsense correlation, Karl pearson's coefficients of correlation, independence. Linear regression: fitting of linear regression using least square regression, coefficient of determination, properties of regression coefficients (only statement) 	15L	

	 Probability : Random experiment, sample space, events types and operations of events Probability definition : classical, axiomatic, Elementary Theorems of probability (without proof) 	
Unit III	$\begin{array}{l} - & 0 \leq P(A) \leq 1, \\ - & P(A \cup B) = P(A) + P(B) - P(A \cap B) \\ - & P(A') = 1 - P(A) \\ - & P(A) \leq P(B) \text{ if } A \subset B \end{array}$ Conditional probability, 'Bayes' theorem, independence, Examples on Probability	15L

Course:	Soft Skills Development	
USCS107	(Credits : 2 Lectures/Week: 3)	

Objectives:

To help learners develop their soft skills and develop their personality together with their technical skills. Developing professional, social and academic skills to harness hidden strengths, capabilities and knowledge equip them to excel in real work environment and corporate life. Understand various issues in personal and profession communication and learn to overcome them

Expected Learning Outcomes:

- 1) To know about various aspects of soft skills and learn ways to develop personality
- 2) Understand the importance and type of communication in personal and professional environment.
- 3) To provide insight into much needed technical and non-technical qualities in career planning.
- 4) Learn about Leadership, team building, decision making and stress management

Unit I	 Introduction to Soft Skills and Hard Skills Personality Development: Knowing Yourself, Positive Thinking, Johari's Window, Communication Skills, Non-verbal Communication, Physical Fitness Emotional Intelligence: Meaning and Definition, Need for Emotional Intelligence, Intelligence Quotient versus Emotional Intelligence Quotient, Components of Emotional Intelligence, Competencies of Emotional Intelligence, Skills to Develop Emotional Intelligence Etiquette and Mannerism: Introduction, Professional Etiquette, Technology Etiquette Communication Today: Significance of Communication, GSC's 3M Model of Communication, Vitality of the Communication Process, Virtues of Listening, Fundamentals of Good Listening, Nature of Non-Verbal Communication, Need for Intercultural Communication, Communicating Digital World 	15L
Unit II	Academic SkillsEmployment Communication: Introduction, Resume, Curriculum Vitae, ScannableResume, Developing an Impressive Resume, Formats of Resume, Job Application orCover LetterProfessional Presentation: Nature of Oral Presentation, Planning a Presentation,Preparing the Presentation, Delivering the PresentationJob Interviews: Introduction, Importance of Resume, Definition of Interview,Background Information, Types of Interviews, Preparatory Steps for Job Interviews,Interview Skill Tips, Changes in the Interview Process, FAQ During InterviewsGroup Discussion: Introduction, Ambience/Seating Arrangement for GroupDiscussion, Importance of Group Discussions, Difference between Group Discussion,Panel Discussion and Debate, Traits, Types of Group Discussions, topic based andCase based Group Discussion, Individual Traits	15L
Unit III	Professional SkillsCreativity at Workplace: Introduction, Current Workplaces, Creativity, Motivation, Nurturing Hobbies at Work, The Six Thinking Hat MethodEthical Values: Ethics and Society, Theories of Ethics, Correlation between Values and Behavior, Nurturing Ethics, Importance of Work Ethics, Problems in the Absence of Work EthicsCapacity Building: Learn, Unlearn and Relearn: Capacity Building, Elements of Capacity Building, Zones of Learning, Ideas for Learning, Strategies for Capacity BuildingLeadership and Team Building: Leader and Leadership, Leadership Traits, Culture and Leadership, Leadership Styles and Trends, Team Building, Types of Teams, Decision Making and Negotiation: Introduction to Decision Making, Steps for Decision Styles, Major Negotiation ConceptsStress and Time Management: Stress, Sources of Stress, Ways to Cope with Stress	15L

Semester I – Practical

Course: USCSP1	Practical of USCS101 + USCS102 + USCS103+USCS104+USCS105+USCS106 (Credits : 6, Lectures/Week: 18)	
USCSP101	 Computer Organization and Design Study and verify the truth table of various logic gates (NOT, AND, OR, NAND, NOR, EX-OR, and EX-NOR). Simplify given Boolean expression and realize it. Design and verify a half/full adder Design and verify half/full subtractor Design and verify the operation of flip-flops using logic gates. Verify the operation of a counter. Verify the operation of a 4 bit shift register Using SPIM, write and test an adding machine program that repeatedly reads in integers and adds them into a running sum. The program should stop when it gets an input that is 0, printing out the sum at that point. Using SPIM, write and test a program that reads in a positive integer using the SPIM system calls. If the integer is not positive, the program should print out the names of the digits of the integers, delimited by exactly one space. For example, if the user entered "528," the output would be "Five Two Eight." # Practical No. 1 to 8 can be performed using any open source simulator (like Logisim) (Download it from https://sourceforge.net/projects/circuit/) # Practical No. 9 and 10 are required to be done using SPIM. SPIM is a self-contained simulator that will run MIPS R2000/R3000 assembly language programs. # Latest version is available at https://sourceforge.net/projects/spimsimulator/ 	

	Progra	mming with Python – I
	1.	Installing and setting up the Python IDLE interpreter. Executing simple
		statements like expression statement (numeric and Boolean types), assert,
		assignment, delete statements; the print function for output.
	2.	Script and interactive modes; defining a function in the two modes; executing
		a script; interactively executing a statement list (semicolon-separated
		sequence of simple statements); the input function.
USCSP102	3.	Programs based on lists, conditional constructs, the for statement and the
		range function; interactively using the built-in functions len, sum, max, min
	4.	Programs related to string manipulation
	5.	Programs based on the while statement; importing and executing built-in
		functions from the time, math and random modules
	6.	Programs using break and continue statements.
	7.	Programs related to dictionaries
	8.	Programs using list comprehenstions and anonymous functions
	9.	Programs using the built-in methods of the string, list and dictionary classes

	ree and Open Source Software	
	1. Identify any Open Source software and create detailed report about it.	
	Sample Guidelines.	
	a. Idea	
	b. What problem does it solves?	
	c. Licensing model	
	d. Intent behind making it open source	
	e. Monetization models	
	f. Popularity	
	g. Impact	
	 Learn at least three different open source licenses and create a brief re 	port
	about them.	
	a. History of license	
	b. Idea	
	c. What problems does it solve?	
	d. Detailed licensing model	
	e. Which popular software are released under this license?	
	f. Any popular news associated with this license?	
	g. Popularity	
	h. Impact	
	3. Contributing to Open Source	
	a. Identify any Open Source project of your interest	
	b. Learn more about the project w.r.t. Lab 1.	
USCSP103	c. Start contributing to the project either by	
	i. Testing	
	ii. Reporting bugs	
	iii. Coding	
	iv. Helping in documentation	
	v. Participating in discussions	
	vi. Participating in pre-release testing programs	
	vii. UI development.	
	viii. Or any other important area.	
	4. Hands on with Open Source Software	
	a. Identify any open source software of your interest	
	b. Learn it from practical view-point	
	c. Give a brief presentation about it to the class	
	d. Sample projects: gcc, gdb, drupal, wordpress, apache web serv	er,
	mysql database	
	5. Contributing to Wikipedia:	
	a. Introduction to wikipedia: operating model, license, how to	
	contribute?	
	b. Create your user account on wikipedia	
	c. Identify any topic of your choice and contribute the missing	
	information	
	6. Github	
	a. Create and publish your own open source project: Write any si	mple
	program using your choice of programming language.	

	1	
USCSP103	 b. Create a repository on github and save versions of your project. You'll learn about the staging area, committing your code, branching, and merging, c. Using GitHub to Collaborate: Get practice using GitHub or other remote repositories to share your changes with others and collaborate on multi-developer projects. You'll learn how to make and review a pull request on GitHub. d. Contribute to a Live Project: Students will publish a repository containing their reflections from the course and submit a pull request. 7. Open Source Operating Systems a. Learn any open source operating system of your choice : Linux, Android, FreeBSD, Open Solaris etc. b. Learn the installation. c. Identify the unique features of the OS of your choice. 8. Virtualization: Open Source virtualization technologies: a. Install and configure any one: VirtualBox, Zen, KVM b. Create and use virtual machines 9. Containerization technologies: docker, rocket, LXD b. Install and configure any containerization technology c. Create and use containers using it 10. Linux Kernel: Learn Linux kernel? b. Operating Model c. Licensing Model d. Licensing Model d. How development works? 	
	e. Download kernel source code.f. Compile the Kernel

USCSP104	 Database Systems For given scenario Draw E-R diagram and convert entities and relationships to table. Write relational algebra queries on the tables created in Practical-1. Perform the following: Viewing all databases Creating a Database Viewing all Tables in a Database Creating Tables (With and Without Constraints) Inserting/Updating/Deleting Records in a Table Saving (Commit) and Undoing (rollback) Perform the following: Altering a Table Dropping/Truncating/Renaming Tables Backing up / Restoring a Database 	

	E Derform the following:
	5. Perform the following:
	Simple Queries
	Simple Queries with Aggregate functions
	Queries with Aggregate functions (group by and having clause)
	6. Queries involving
	Date Functions
	String Functions
	Math Functions
	7. Join Queries
	Inner Join
	Outer Join
	8. Subqueries
	With IN clause
	With EXISTS clause
	9. Views
	Creating Views (with and without check option)
	Dropping views
	Selecting from a view
	10. DCL statements
	Granting and revoking permissions
	Discrete Mathematics
	1. Graphs of standard functions such as absolute value function, inverse
	function, logarithmic and exponential functions, flooring and ceiling functions,
	trigonometric functions over suitable intervals.
	2. Partial ordering sets, Hasse diagram and Lattices.
	3. Recurrence relation.
USCSP105	4. Different counting principles.
	5. Finite state Automata and Finite state machines.
	6. Warshall's Algorithm.
	7. Shortest Path algorithms.
	8. Operations on graph.
	9. Breadth and Depth First search algorithms.
	10. Concept of searching, inserting and deleting from binary search trees.
	Descriptive Statistics and Introduction to Probability (To be implemented using R)
	1. Frequency distribution and data presentation
	2. Measures of central tendency
	3. Data entry using, functions, c(), scan (), Creating vectors, Mathematical
	Operations: ** +/-/*/ / ^ , exp, log, log10, etc, creating vector of text type,
	useful functions: data, frame, matrix operations, seq(), split() etc.
USCSP106	4. Frequency distribution using cut(), table()
	5. Data presentation
	6. Summary Statistics (measures of central tendency, dispersion)
	7. Measures of skewness and kurtosis
	8. Correlation and regression
	9. Probability
	10. Conditional probability

Semester II - Theory

Course:	Programming with C	
USCS201	(Credits : 2 Lectures/Week: 3)	
Objectives :		
The objecti	ve of this course is to provide a comprehensive study of the C programming language, str	essing
upon the	strengths of C, which provide the students with the means of writing modular, eff	icient,
maintainab	le, and portable code.	
Expected Lea	arning Outcomes	
	ents should be able to write, compile and debug programs in C language.	
	ents should be able to use different data types in a computer program.	
	ents should be able to design programs involving decision structures, loops and functions.	
	ents should be able to explain the difference between call by value and call by reference	
	ents should be able to understand the dynamics of memory by the use of pointers.	
6) Stud	ents should be able to use different data structures and create/update basic data files.	1
	Structure of C program : Header and body, Use of comments. Interpreters vs compilers, Python vs C. Compilation of a program. Formatted I/O: printf(), scanf().	
	Data : Variables, Constants, data types like: int, float char, double and void, short and long size qualifiers, signed and unsigned qualifiers. Compare with datatypes in Python. Compare static typing in C vs dynamic typing in Python	
Unit I	Variables : Declaring variables, scope of the variables according to block, hierarchy of data types. Compare explicit declarations in C with implicit declarations in Python.	15L
	Types of operators : Arithmetic, relational, logical, compound assignment, increment and decrement, conditional or ternary, bitwise and comma operators. Precedence and order of evaluation, statements and Expressions. Automatic and explicit type conversion.	
	Iterations : Control statements for decision making: (i) Branching: if statement, else if statement, (does the writer mean if-else or nested ifs)switch statement. (ii) Looping: while loop, do while, for loop. (iii) Jump statements: break, continue and goto.	
	Arrays: (One and two dimensional), declaring array variables, initialization of arrays, accessing array elements. Compare array types of C with list and tuple types of Python.	
	Data Input and Output functions : Character I/O format: getch(), getche(), getchar(), getc(), getc(), putchar(), putc(), puts().	
Unit II	Manipulating Strings : Declaring and initializing String variables, Character and string handling functions. Compare with Python strings.	15L
	Functions : Function declaration, function definition, Global and local variables, return statement, Calling a function by passing values.	
		1

Pointers as function arguments, Functions returning pointers.Dynamic Memory Allocation: malloc(), calloc(), realloc(), free() and sizeof operator. Compare with automatic garbage collection in Python.Unit IIIStructure: Declaration of structure, reading and assignment of structure variables, Array of structures, arrays within structures, structures within structures. Compare C structures with Python tuples.Unions: Defining and working with unions.File handling: Different types of files like text and binary, Different types of functions: fopen(), fclose(), fgetc(), fputc(), fgets(), fputs(), fscanf(), fprintf(), getw(), putw(), fread(), fwrite(), fseek().		Pointer: Fundamentals, Pointer variables, Referencing and de-referencing, Pointer Arithmetic, Using Pointers with Arrays, Using Pointers with Strings, Array of Pointers,	
Compare with automatic garbage collection in Python.Unit IIIStructure: Declaration of structure, reading and assignment of structure variables, Array of structures, arrays within structures, structures within structures. Compare C structures with Python tuples.Unions: Defining and working with unions.File handling: Different types of files like text and binary, Different types of functions: fopen(), fclose(), fgetc(), fputc(), fgets(), fputs(), fscanf(), fprintf(), getw(), putw(), fread(),		Pointers as function arguments, Functions returning pointers.	
 Unit III of structures, arrays within structures, structures within structures. Compare C structures with Python tuples. Unions: Defining and working with unions. File handling: Different types of files like text and binary, Different types of functions: fopen(), fclose(), fgetc(), fputc(), fgets(), fputs(), fscanf(), fprintf(), getw(), putw(), fread(), 			
File handling : Different types of files like text and binary, Different types of functions: fopen(), fclose(), fgetc(), fputc(), fgets(), fputs(), fscanf(), fprintf(), getw(), putw(), fread(),	Unit III	of structures, arrays within structures, structures within structures. Compare C structures	15
fopen(), fclose(), fgetc(), fputc(), fgets(), fputs(), fscanf(), fprintf(), getw(), putw(), fread(),		Unions: Defining and working with unions.

Course: USCS202	Programming with Python – II (Credits : 2 Lectures/Week: 3)	
now prograi	re of this paper is to explore the style of structured programming to give the idea to the st mming can be used for designing real-life applications by reading/writing to files, GUI prog database/networks and various other features.	
1) Stur 2) Stur 3) Stur 4) Stur 5) Stur	earning Outcomes dents should be able to understand how to read/write to files using python. dents should be able to catch their own errors that happen during execution of programs. dents should get an introduction to the concept of pattern matching. dents should be made familiar with the concepts of GUI controls and designing GUI application dents should be able to connect to the database to move the data to/from the application tudents should know how to connect to computers, read from URL and send email.	ations.
Unit I	 Python File Input-Output: Opening and closing files, various types of file modes, reading and writing to files, manipulating directories. Iterables, iterators and their problemsolving applications. Exception handling: What is an exception, various keywords to handle exceptions such try, catch, except, else, finally, raise. Regular Expressions: Concept of regular expression, various types of regular expressions, using match function. 	15 L
Unit II	GUI Programming in Python (using Tkinter/wxPython/Qt) What is GUI, Advantages of GUI, Introduction to GUI library. Layout management, events and bindings, fonts, colours, drawing on canvas (line, oval, rectangle, etc.) Widgets such as : frame, label, button, checkbutton, entry, listbox, message, radiobutton, text, spinbox etc	15 L
Unit III	Database connectivity in Python: Installing mysql connector, accessing connector module module, using connect, cursor, execute & close functions, reading single & multiple results of query execution, executing different types of statements, executing transactions, understanding exceptions in database connectivity. Network connectivity: Socket module, creating server-client programs, sending email, reading from URL	15 L

Course:	Linux	
USCS203	(Credits : 2 Lectures/Week: 3)	
administra computer s Expected L 1) Up a g 2) Th 3) Stu	introduces various tools and techniques commonly used by Linux programmers, system tors and end users to achieve their day to day work in Linux environment. It is designed is students who have limited or no previous exposure to Linux. earning Outcomes: foon completion of this course, students should have a good working knowledge of Linux, graphical and command line perspective, allowing them to easily use any Linux distribution is course shall help student to learn advanced subjects in computer science practically. Indent shall be able to progress as a Developer or Linux System Administrator using the a Il set.	for from both on.
Unit I	 Introduction History of Linux, Philosophy, Community, Terminology, Distributions, Linux kernel vs distribution. Why learn Linux? Importance of Linux in software ecosystem: web servers, supercomputers, mobile, servers. Installation Installation methods, Hands on Installation using CD/DVD or USB drive. Linux Structure Linux Architecture, Filesystem basics, The boot process, init scripts, runlevels, shutdown process, Very basic introductions to Linux processes, Packaging methods: rpm/deb, Graphical Vs Command line. 	15L
Unit II	 Graphical Desktop Session Management, Basic Desktop Operations, Network Management, Installing and Updating Software, Text editors: gedit, vi, vim, emacs, Graphics editors, Multimedia applications. Command Line Command line mode options, Shells, Basic Commands, General Purpose Utilities, Installing Software, User management, Environment variables, Command aliases. Linux Documentation man pages, GNU info, help command, More documentation sources File Operations Filesystem, Filesystem architecture, File types, File attributes, Working with files, Backup, compression 	15L
Unit III	 Security Understanding Linux Security, Uses of root, sudo command, working with passwords, Bypassing user authentication, Understanding ssh Networking Basic introduction to Networking, Network protocols: http, ftp etc., IP address, DNS, Browsers, Transferring files. ssh, telnet, ping, traceroute, route, hostname, networking GUI. Basic Shell Scripting Features and capabilities, Syntax, Constructs, Modifying files, Sed, awk command, File manipulation utilities, Dealing with large files and Text, String manipulation, Boolean expressions, File tests, Case, Debugging, Regular expressions 	15L

programm Understan application Expected L 1) Learn 2) Explo	To explore and understand the concepts of Data Structures and its signific ing. Provide and holistic approach to design, use and implement abstract data d the commonly used data structures and various forms of its implementation for o us using Python. earning Outcomes: about Data structures, its types and significance in computing re about Abstract Data types and its implementation y to program various applications using different data structure in Python	a types.
Unit I	 Abstract Data Types: Introduction, The Date Abstract Data Type, Bags, Iterators. Application Arrays: Array Structure, Python List, Two Dimensional Arrays, Matrix Abstract Data Type, Application Sets and Maps: Sets-Set ADT, Selecting Data Structure, List based Implementation, Maps-Map ADT, List Based Implementation, Multi-Dimensional Arrays-Multi-Array ADT, Implementing Multiarrays, Application Algorithm Analysis: Complexity Analysis-Big-O Notation, Evaluating Python Code, Evaluating Python List, Amortized Cost, Evaluating Set ADT, Application Searching and Sorting: Searching-Linear Search, Binary Search, Sorting-Bubble, Selection and Insertion Sort, Working with Sorted Lists-Maintaining Sorted List, Maintaining sorted Lists. 	15L
Unit II	Linked Structures: Introduction, Singly Linked List-Traversing, Searching, Prepending and Removing Nodes, Bag ADT-Linked List Implementation. Comparing Implementations, Linked List Iterators, More Ways to Build Kinked Lists, Applications-Polynomials Stacks: Stack ADT, Implementing Stacks-Using Python List, Using Linked List, Stack Applications-Balanced Delimiters, Evaluating Postfix Expressions Queues: Queue ADT, Implementing Queue-Using Python List, Circular Array, Using List, Priority Queues- Priority Queue ADT, Bounded and unbounded Priority Queues Advanced Linked List: Doubly Linked Lists-Organization and Operation, Circular Linked List-Organization and Operation, Multi Lists	15L

Unit III	Recursion: Recursive Functions, Properties of Recursion, Its working, Recursive Applications Hash Table: Introduction, Hashing-Linear Probing, Clustering, Rehashing, Separate Chaining, Hash Functions Advanced Sorting: Merge Sort, Quick Sort, Radix Sort, Sorting Linked List Binary Trace: Trace Structure, Binary Trace Properties, Implementation and Traversals	15L
	Binary Trees: Tree Structure, Binary Tree-Properties, Implementation and Traversals,	
	Expression Trees, Heaps and Heapsort, Search Trees

Course:	Calculus		
USCS205	(Credits : 2 Lectures/Week: 3)		
Objectives:			
The course is	s designed to have a grasp of important concepts of Calculus in a scientific way. It covers to	opics from	
as basic as d	efinition of functions to partial derivatives of functions in a gradual and logical way. The	learner is	
expected to a	solve as many examples as possible to a get compete clarity and understanding of the topic	s covered.	
Expected Lea	arning Outcomes:		
1) Unders	standing of Mathematical concepts like limit, continuity, derivative, integration of functions		
2) Ability	to appreciate real world applications which uses these concepts.		
3) Skill to	formulate a problem through Mathematical modeling and simulation.		
	DERIVATIVES AND ITS APPLICATIONS:		
	Review of Functions, limit of a function, continuity of a function, derivative function		
Unit I	Derivative In Graphing And Applications: Analysis of Functions: Increase, Decrease,	15L	
Onici	Concavity, Relative Extrema; Graphing Polynomials, Rational Functions, Cusps and Vertica		
	Tangents. Absolute Maxima and Minima, Applied Maximum and Minimum Problems	ms,	
	Newton's Method.		
	INTEGRATION AND ITS APPLICATIONS:		
	An Overview of the Area Problem, Indefinite Integral, Definition of Area as a Limit; Sigma		
Unit II	Notation, Definite Integral, Evaluating Definite Integrals by Substitution, Area Betweer	15L	
Onten	Two Curves, Length of a Plane Curve. Numerical Integration: Simpson's Rule. Modeling		
	with Differential Equations, Separation of Variables, Slope Fields, Euler's Method, First-		
	Order Differential Equations and Applications.		
	PARTIAL DERIVATIVES AND ITS APPLICATIONS:		
	Functions of Two or More Variables Limits and Continuity Partial Derivatives	,	
Unit III	Differentiability, Differentials, and Local Linearity, Chain Rule, Directional Derivatives and	15L	
	Gradients, Tangent Planes and Normal, Vectors, Maxima and Minima of Functions of Two		
	Variables.

Course:	Statistical Methods and Testing of Hypothesis		
USCS206	(Credits : 2 Lectures/Week: 3)		
Objectives :			
The purpose	of this course is to familiarize students with basics of Statistics. This will be essential for	r prospective	
researchers a	and professionals to know these basics.		
Expected Lea	arning Outcomes:		
1) Enable	learners to know descriptive statistical concepts		
2) Enable	study of probability concept required for Computer learners		
	Standard distributions: random variable; discrete, continuous, expectation and		
Unit I	variance of a random variable, pmf, pdf, cdf, reliability,	15L	
Unit I	Introduction and properties without proof for following distributions; binomial,	12	
	normal, chi-square, t, F. Examples		
	Hypothesis testing: one sided, two sided hypothesis, critical region, p-value, tests		
Unit II	based on t, Normal and F, confidence intervals.	15L	
	Analysis of variance : one-way, two-way analysis of variance		
	Non-parametric tests: need of non-parametric tests, sign test, Wilicoxon's signed		
Unit III	rank test, run test, Kruskal-Walis tests.	15L	
Onit in	Post-hoc analysis of one-way analysis of variance : Duncan's test Chi-square test of	IJL	
	association

Course:	Green Technologies		
USCS207	(Credits : 2 Lectures/Week: 3)		
Objective			
To familia	To familiarize with the concept of Green Computing and Green IT infrastructure for making computing and		
informati	on system environment sustainable. Encouraging optimized software and hardware de	esigns for	
developm	development of Green IT Storage, Communication and Services. To highlight useful approaches to embrace		

green IT initiatives.

Expected Learning Outcomes: 1) Learn about green IT can be achieved in and by hardware, software, network communication and data center operations. 2) Understand the strategies, frameworks, processes and management of green IT Green IT Overview: Introduction , Environmental Concerns and Sustainable Development, Environmental Impacts of IT, Green I, Holistic Approach to Greening IT, Greening IT, Applying IT for Enhancing Environmental Sustainability, Green IT Standards and Eco-Labelling of IT, Enterprise Green IT Strategy, Green Washing, Green IT: Burden or Opportunity? Green Devices and Hardware: Introduction , Life Cycle of a Device or Hardware, Reuse, Unit I 15L **Recycle and Dispose** Green Software: Introduction , Processor Power States , Energy-Saving Software Techniques, Evaluating and Measuring Software Impact to Platform Power Sustainable Software Development: Introduction, Current Practices, Sustainable Software, Software Sustainability Attributes, Software Sustainability Metrics, Sustainable Software Methodology, Defining Actions Green Data Centres: Data Centres and Associated Energy Challenges, Data Centre IT Infrastructure, Data Centre Facility Infrastructure: Implications for Energy Efficiency, IT Infrastructure Management, Green Data Centre Metrics Green Data Storage: Introduction , Storage Media Power Characteristics, Energy Management Techniques for Hard Disks, System-Level Energy Management Unit II Green Networks and Communications: Introduction, Objectives of Green Network 15L Protocols, Green Network Protocols and Standards Enterprise Green IT Strategy: Introduction, Approaching Green IT Strategies, Business Drivers of Green IT Strategy, Business Dimensions for Green IT Transformation, Organizational Considerations in a Green IT Strategy, Steps in Developing a Green IT Strategy, Metrics and Measurements in Green Strategies. Sustainable Information Systems and Green Metrics: Introduction, Multilevel Sustainable Information, Sustainability Hierarchy Models, Product Level Information, Individual Level Information, Functional Level Information, Organizational Level Information, Measuring the Maturity of Sustainable ICT Enterprise Green IT Readiness: Introduction, Readiness and Capability, Development of the G-Readiness Framework, Measuring an Organization's G-Readiness Unit III 15L Sustainable IT Services: Creating a Framework for Service Innovation: Introduction, Factors Driving the Development of Sustainable IT, Sustainable IT Services (SITS), SITS Strategic Framework Green Enterprises and the Role of IT: Introduction, Organizational and Enterprise Greening, Information Systems in Greening Enterprises, Greening the Enterprise: IT Usage and Hardware, Inter-organizational Enterprise Activities and Green Issues Text book:

Semester II – Practical

Course: USCSP2	Practical of USCS201 + USCS202 + USCS203+USCS204+ USCS205+ USCS206 (Credits : 6, Lectures/Week: 18)			
	Programming with C			
	1. Programs to understand the basic data types and I/O.			
	2. Programs on Operators and Expressions			
	3. Programs on decision statements.			
	4. Programs on looping.			
USCSP201	5. Programs on arrays.			
	6. Programs on functions.			
	7. Programs on structures and unions.			
	8. Programs on pointers.			
	9. Programs on string manipulations.			
	10. Programs on basic file operations.			
	Programming with Python-II			
	1. Programs to read and write files.			
	2. Programs with iterables and iterators.			
USCSP202	3. Program to demonstrate exception handling.			
03C3P202	4. Program to demonstrate the use of regular expressions.			
	5. Program to show draw shapes & GUI controls.			
	6. Program to create server-client and exchange basic information.			
	7. Program to send email & read contents of URL.			

	inyx	
	1. Linux Installation:	
	a. Install your choice of Linux distribution e.g. Ubuntu, Fedora, Debian.	
	b. Try different installation media like CD/DVD, USB Drive to install.	
	c. Customize desktop environment by changing different default options like	
	changing default background, themes, screensavers.	
	2.	
	 Screen Resolution: Ascertain the current screen resolution for your desktop. 	
	b. Networking: Get the current networking configuration for your desktop.	
	Are you on a wired or a wireless connection? What wireless networks are	
	available, if any?	
	c. Time Settings Change the time zone of your system to (or New York Time	
	if you are currently in Indian time). How does the displayed time change?	
	After noting the time change, change the time zone back to your local time zone.	
	3. Installing and Removing Software:	
	a. Install gcc package. Verify that it runs, and then remove it.	
	4. Documentations:	
	a. Finding Info Documentation: From the command line: bring up the info	
	page for the grep command. Bring up the usage section.	
	b. Finding man pages From the command line: Bring up the man page for the 'ls' command. Scroll down to the EXAMPLES section.	
	c. Finding man pages by Topic What man pages are available that	
	document file compression?	
USCSP203	d. Finding man pages by Section From the command line, bring up the man	
	page for the printf library function. Which manual page section are library	
	functions found?	
	e. Command-Line Help List the available options for the mkdir command.	
	How can you do this? 5. Command line operations:	
	a. Install any newpackage on your system	
	b. Remove the package installed	
	c. Find the passwd file in / using find command	
	d. Create a symbolic link to the file you found in last step	
	e. Create an empty file example.txt and move it in /tmp directory using	
	relative pathname.	
	f. Delete the file moved to /tmp in previous step using absolute path.	
	g. Find the location of ls, ps, bash commands.	
	6. File Operations:	
	a. Explore mounted filesystems on your system.	
	b. What are different ways of exploring mounted filesystems on Linux?	
	c. Archive and backup your home directory or work directory using tar, gzip	
	commands.	
	d. Use dd command to create files and explore different options to dd.	
	e. Use diff command to create diff of two files.	
	f. Use patch command to patch a file. And analyze the patch using diff	
	command again.	

7.	Use environment
	a. Which account are you logged in? How do you find out?
	b. Display /etc/shadow file using cat and understand the importance of
	shadow file. How it's different than passwd file.
	c. Get you current working directory.
	d. Explore different ways of getting command history, how to run previously
	executed command without typing it?
	e. Create alias to most commonly used commands like.
8.	
	a. Create, modify, search, navigate a file in editor.
	b. Learn all essential commands like search, search/replace, highlight, show
	line numbers.
9.	Linux Security:
	a. Use of sudo to change user privileges to root
	b. Identify all operations that require sudo privileges
	c. Create a new user and add it to sudo configuration file.
	d. Set password for new user.
	e. Modify the expiration date for new user using password ageing.
	f. Delete newly added user.
10	Network:
	a. Get IP address of your machine using ifconfig.
	b. If IP is not set, then assign an IP address according to your network settings.
	c. Get hostname of your machine.
	d. Use ping to check the network connectivity to remote machines.
	e. Use telnet/ssh to connect to remote machines and learn the difference
	between the two.
	f. Troubleshooting network using traceroute, ping, route commands.
11	Shell Scripting
	a. Searching with grep: Search for your username in the /etc/passwd file.
	b. Parsing files with awk: Display in a column a unique list of all the shells used
	for users in /etc/passwd. Which field in /etc/passwd holds the shell (user
	command interpreter in the manual page)? How do you make a list of unique
	entries, that is, no repeated entries?
	c. Searching and substituting with sed: Search all instances of the user
	command interpreter (shell) equal to /bin/false in /etc/passwd and substitute
	with /bin/bash using sed.
	d. Exit status: write a script which does ls to a non existent file. Display an exit
	status of the previous command. Now create the file and again display the exit
	status. In each task send the Is output to /dev/null
	e. Working with files: Write a shell script which will ask user for a directory,
	create that directory and switch to it and tell the user where you are using pwd
1	command. Now use touch to create some new files followed by displaying the

f. Environment variables: Write a script which displays all environment	
variables on the system.	
g. Functions: Write a script that asks user for a number (1,2 or 3) which is	
used to call a function with the number in its name. The function then displays	
a message with the function number within it, example: "This message is from	
function number 4."	
h. Arithmetic: Write a script which will work as arithmetic calculator to add,	
subtract, multiply, divide. The user should pass an argument on the command	
line a letter (a,s,m or d) and two numbers. If wrong number of arguments are	
passed then display an error message. Make use of functions to perform	
operations.	
i. Case Statements: Write a script that will be given a month number as the	
argument and will translate this number into a month name. The result will be printed to stdout.	
j. Script Arguments and Usage Information: Write a script that takes exactly	
one argument, a directory name. The script should print that argument back to	
standard output. Make sure the script generates a usage message if needed	
and that it handles errors with a message.	
k. Randomness: Create a script that takes a word as an argument from the	
user, then appends a random number to the word and display it to the user.	
Put in a check to make sure the user passed in a word, displaying a usage	
statement if a word was not passed as an argument.	
will perform three operations on the two strings: (1) Use the test command to	
see if one of the strings is of zero length and if the other is of non-zero length,	
telling the user of both results. (2) Determine the length of each string and tell	
the user which is longer or if they are of equal length. (3) Compare the strings	
to see if they are the same. Let the user know the result.	
12. Processes	
a. Background and Foreground Jobs: Create a job that writes the date to an	
output file thrice, with a gap of 60 seconds and 180 seconds. Check whether	
the job is running and bring it to foreground job. Stop the foreground job and	
make it run in the background. Finally, kill the background job and verify its	
status.	
b. Scheduling a One-Time Backup: Create job using at to back up files in one	
directory to another 10 minutes from now.	
c. Scheduling Repeated Backups: Set up a cron job to backup the files in one	
directory to another every day at 10 am. Put the commands in file called	
mycron.	

	Data structures			
	1) Implement Linear Search to find an item in a list.			
	2) Implement binary search to find an item in an ordered list.			
	3) Implement Sorting Algorithms			
	a. Bubble sort			
	b. Insertion sort			
	c. Quick sort			
	d. Merge Sort			
	4) Implement use of Sets and various operations on Sets.			
	5) Implement working of Stacks. (pop method to take the last item added off the			
	stack and a push method to add an item to the stack)			
	6) Implement Program for			
USCSP204	a. Infix to Postfix conversion			
	b. Postfix Evaluation			
	7) Implement the following			
	a. A queue as a list which you add and delete items from.			
	b. A circular queue. (The beginning items of the queue can be reused).			
	8) Implement Linked list and demonstrate the functionality to add and delete			
	items in the linked list.			
	9) Implement Binary Tree and its traversals.			
	10) Recursive implementation of			
	a. Factorial			
	b. Fibonacci			
	c. Tower of Hanoi			
	Calculus			
	1. Continuity of functions; Derivative of functions			
	2. Increasing, decreasing, concave up and concave down functions			
	3. Relative maxima, relative minima, absolute maxima, absolute minima			
	4. Newton's method to find approximate solution of an equation			
USCSP205	5. Area as a limit and length of a plane curve			
	6. Numerical integration using Simpson's rule			
	7. Solution of a first order first degree differential equation, Euler's method			
	8. Calculation of Partial derivatives of functions			
	9. Local linear approximation and directional derivatives			
	10. Maxima and minima of functions of two variables			
	Statistical Methods and Testing of Hypothesis			
	1. Problems based on binomial distribution			
	2. Problems based on normal distribution			
	3. Property plotting of binomial distribution			
	4. Property plotting of normal distribution			
USCSP206	5. Plotting pdf, cdf, pmf, for discrete and continuous distribution			
	6. t test, normal test, F test			
	7. Analysis of Variance			
	8. Non parametric tests- I			
	9. Non-Parametric tests – II			
	10. Post-hoc analysis of one-way analysis			

Evaluation Scheme

- I. Internal Exam-25 Marks
 - (i) Test– 20 Marks

20 marks Test – Duration 40 mins

It will be conducted either using any open source learning management system such as Moodle (Modular object-oriented dynamic learning environment)Or a test based on an equivalent online course on the contents of the concerned course(subject)offered by or build using MOOC (Massive Open Online Course)platform.

(ii) 5 Marks - Active participation in routine class instructional deliveries

Overall conduct as a responsible student, manners, skill in articulation, leadership qualities demonstrated through organizing co-curricular activities, etc.

II. External Examination- 75 Marks

- (i) Duration 2.5 Hours.
- (ii) Theory question paper pattern:-

All questions are compulsory.				
Question	Based on	Marks		
Q.1	Unit I	20		
Q.2	Unit II	20		
Q.3	Unit III	20		
Q.4	Unit I,II and III	15		

- All questions shall be compulsory with internal choice within the questions.
- Each Question may be sub-divided into sub questions as a, b, c, d & e, etc & the allocation of Marks depends on the weightage of the topic.

III. Practical Examination – 300 marks (50 marks x 6 core papers)

- Each core subject carries 50 Marks : 40 marks + 05 marks (journal)+ 05 marks(viva)
- Minimum 75 % practical from each core subjects are required to be completed and written in the journal.

(Certified Journal is compulsory for appearing at the time of Practical Exam)
